# Softengi World

# Organization structure

# Company's mission:

## ✓ For the client

From optimizing business processes, creating better products, and reaching core goals more efficiently through digital transformation, Softengi took its mission statement up a notch towards enhancing clients' company capabilities overall. The client's vision can become a reality through effective and sustainable development.

## ✓ For the personnel

Softengi emphasizes the role of a stable working environment for its employees in times of political instability in the world. By focusing on consistently providing the best services for clients through innovation and operational excellence, the company's employees contribute to the client's success, which positively affects their personal well-being.

A silhouette of a person standing on a rocky mountain peak, looking out over a vast landscape under a sunset sky. The person is wearing a backpack and a hooded jacket.

Personnel is expected to:

- ✓ Communicate in a clear way (concise, structured, direct)
- ✓ Communicate with respect for others (being sensitive to other's personnel's points of view)
- ✓ To find a common ground in case of a conflict

WHAT ARE WE CREATING?

# Jewelry fitting (AR)

"We are creating a product that will soon be in demand in all the major shopping malls in Europe and possibly the world!

Our customer works closely with global brands such as Louis Vuitton and Swarovski. It consists of simplifying the ordering process and shopping for luxury jewelry, turning it into real fun!

Jewelry fitting is carried out using Augmented Reality technology, combining two independent spaces: the world of real objects around us and the virtual world created by a computer! The application visualizes the ring on your finger and allows you to make a few short notes of how the ring looks on your hand and send this video to yourself and friends via social networks or share the record in stories.»

# Mental Well-being Clinic

"The project is called the "Mental Well-being Clinic" which is done for a customer in Great Britain.

The customer's company has been on the market for several years and has an exciting mission:

Restoring or improving mental health with the help of immersive virtual reality technologies. In the world of virtual reality, the client creates interactive and non-interactive experiences for therapy that will transport her to the great African savanna because it is believed that nature is one of the best non-drug methods of improving mental well-being. Throughout the session, you will enjoy various corners of African wildlife. Interacting with its representatives: birds and animals - lions, elephants, zebras, giraffes, and others. And all this - being in complete safety: in a clinic, home, school, or office. All you need are virtual reality glasses and a desire to get a new experience or therapy.»

# O-VTMT (Tailors Project)

«Another gallery project by Denis and his team, O-VTMT, is a project designed specifically for tailors and their clients. The program allows you to reduce the client's time, freeing him from going to the studio.

The application asks you to take only 2 full-face and profile photos, after which the program will make a 3-d model of your body, and it will not be difficult for a tailor to put a suit on you and see how well it fits from all sides. The program allows you to expand your business for both tailors and clients. While in Ukraine, you can choose some exotic African designer or a classic European designer from reserved countries like Finland or Norway, or your designer may live in Lviv or the Hutsul mountains.»

## Electronic Seal. UNDP/Tajikistan

«Project with UNDP and the Customs Service of the Republic of Tajikistan - monitoring system "Electronic seal."»

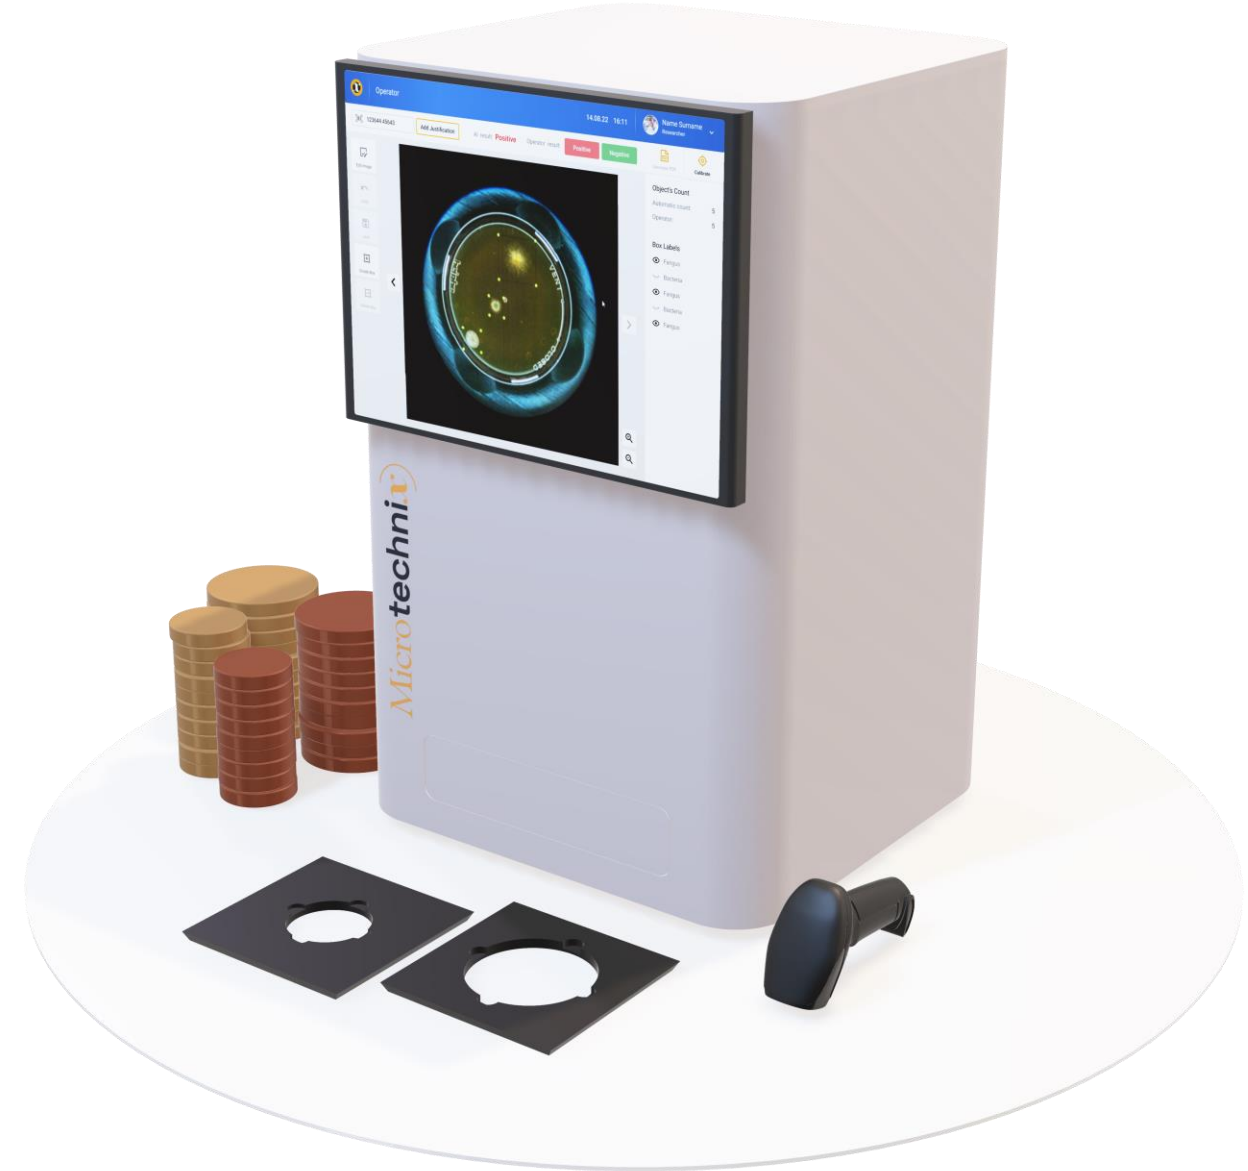

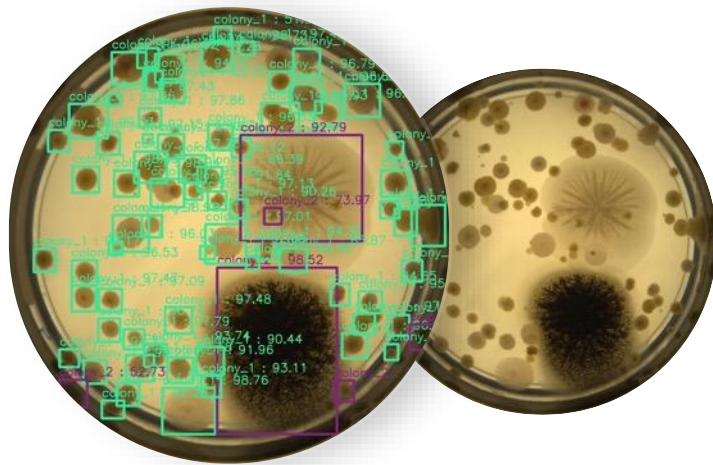

The essence of the project is a satellite tracking and remote control system, the element of which is the "Electronic Seal," which is installed as a lock on a car with particularly important cargo.

The team traveled to the capital of Tajikistan to make a presentation of the developed system, where they were warmly received by both the nature of the country and the team of project clients.»

# MicroTechniX

«This is a project for MicroTechniX, with which we do about 20 projects in 1 year. It all started with a small project using ML/AI, the purpose of which was to identify bacteria, mold, and markers on Petri dishes.

# DELIVERS **YOUR SUCCESS**

We wish you a beautiful journey!

See you soon...
